

“If you’re looking for a firm that’s extremely competent... with a special skill for leading discussions with shared governance, steering and oversight committees, then I highly recommend Harris.”

—Higher education client

EDUCATION

There’s one math problem that stumps education administrators everywhere: How can we make less equal more?

With funds diminishing and pressure mounting for high-performing learning spaces, Harris & Associates keeps K-12 districts and community colleges ahead of the curve on capital improvement programs.

One call gets you program and construction managers well versed in all facets of campus construction, expansion and modernization. We immerse ourselves in your campus and culture and tailor our services to:

- Leverage space and equipment resources to meet curriculum requirements
- Minimize future impact to the General Fund with efficient operations, maintenance and life-cycle solutions
- Represent you during every phase of a long-term, multi-site capital improvement program

We coordinate project logistics in ways that help you stay focused on your most important job: educating our next generation.

“As our trusted advisor, you have guarded the district’s interests and supported its goals. Your efforts also secured \$41 million in additional state, local and federal funds for the district.”

—School district client

E

Harris approached our program as an extension of our district's staff and as team members. Their collaborative approach with architects, engineers and contractors makes for very successful projects.

—School district client

Smart ideas from sharp people.

What do your students want from their campus experience? How can your institution stay competitive? How can you cost-effectively make your vision a reality?

Harris hires professionals trained from the best universities and credentialing programs to answer these questions. We invest in their ongoing development, so they know how to transform client challenges into innovative solutions—whether incorporating energy efficiency measures or finding ways to combine projects and save money.

We've mastered the art of political science.

Harris has a successful history of managing groups of diverse decision-makers, including citizens' oversight committees, planning and design committees and faculty stakeholder groups.

We quickly learn the dynamics at play in each district and determine what is needed to sustain political and public momentum. Every step of the way, you can count on us to remain transparent with leadership, administration, constituents and end users.

Let's talk about getting results.

WATER + WASTEWATER

**A full-service firm that understands your world?
How refreshing.**

You face lots of pressure managing the planet's most precious resource. What about *your* resources? Staff and funding are hard to come by these days; yet demand surges for expensive infrastructure improvements and a safe, clean and abundant water supply.

Harris & Associates strikes the right balance.

In one firm, you get industry-leading construction management and engineering services—that's a rare find. Our experienced professionals thrive in today's do-more-with-less economy, helping agencies and districts with:

- Upgrades, expansions and new construction for treatment plants, pipelines, and pump stations
- Analysis, master planning and rehabilitation for water distribution, sanitary sewers and storm conveyance methods
- Financing options, including grants and low-interest loans, for capital improvement programs
- Staff augmentation and/or owner representation throughout the construction process

Harris has consistently provided innovative recommendations factoring in quality, cost, use of existing assets and regulatory compliance...We believe that the team has been a vital component in our efforts to resolve a very difficult wastewater regulatory situation in our community.

—Wastewater treatment plant client

W

Your team addressed numerous concerns from local agencies and other stakeholders. Your ability to evaluate construction progress on a daily basis and identify problems before they occurred helped keep activities on schedule and within budget.

—Water agency client

Innovation makes Harris your clear choice.

Clean and green—those are the goals today due to dwindling water supplies and stringent environmental regulations. We staff our team with experienced professionals credentialed in the latest sustainable engineering and construction techniques to keep your projects ahead of the curve.

Our clients and their constituents alike benefit from our trenchless technology expertise, which enables the rehabilitation of underground water and sewer lines without digging up streets. During construction, we employ sustainable techniques such as using recycled aggregate for backfill and asphalt recycled from rubber tires.

We're also at the forefront of sustainable storm water and wastewater initiatives—like rain gardens, membrane filters and permeable pavement—to remove contaminants and transform refuse into valuable assets.

Our professionals are leading sustainable water initiatives. Our experience working on the United States' largest desalinization project in Carlsbad, California readily transfers to other clients looking to improve the reliability of their water supply.

Let's talk about getting results.

Get in touch with our team to learn more about our qualifications and successful projects—and how we can keep water/wastewater initiatives flowing in your community.
